### Abstract

*Possibilities for insurance development in the Republic of Macedonia are growing through the time. Insurance is multidisciplinary phenomenon and can be analyze from economic, actuary and law aspect. The aim of the paper is to analyze law aspects for development of insurance, with particular accent of life insurance, as a main pillar for insurance development. Law regulation of life insurance is in accordance with EU and world standards and it gives possibilities for further development. With analyzing parameters, it can be concluded that numbers, percentages of life insurance in total insurance are increased every year. This trend should be used from different subjects affected by insurance. Also different laws, its implication, implementation and criminal prevention of insurance fraud, will be analyzed in the paper with appropriate methodological instruments. All that should be done in order to extract useful conclusions and recommendations for future development of the sector.*

**Keywords:** insurance law, life insurance, development, economic growth

### 1. Introduction

Law regulation of life insurance in Republic of Macedonia is in accordance with high modern standards of regulation and it gives opportunity for further development of the sector in general all law regulations, from Constitution, different laws and bylaws passed by the Parliament of Macedonia, Ministry of finance and especially Insurance Supervision Agency of Macedonia-ISA as a regulatory body. According to all previous EU-progress reports for Macedonia, insurance sector is going very well and in right direction, which means that law regulation is fully in accordance with all that, but in the future necessary changes must be done and will be done. Insurance market and other financial markets, longer periods are influenced by financial deregulation and liberalization. The global financial crisis had a big impact on the Macedonian economy, hindering the implementation of numerous projects. In developed countries, life insurance is something that has any reasonable person, but in Macedonia it is still undergoing a luxury, even it is necessity, but low standard of living, low salaries are main factors for reason that life insurance is not yet developed. Fact that is good is that recent trends in this sector are very rejoicing. All this is due to lack of awareness about itself and life insurance which is a kind of savings or investment savings. If you come to the realization of any risks that would have harmful effects on life, then money after the expiry of the insured period may be used by the insured or any other person. There is a strong association between life insurance and the development of the domestic market of capital.

Within the insurance, innovations of existing and development of new products are needed and that will increase sales in the insurance sector. The most successful will be those companies which will place new innovative products. Insurance as one of the main economic institutions occurred spontaneously, in the development of human civilization is experiencing a long evolutionary path, adaptation, innovation and modernization. Life insurance is experiencing an upswing especially in the last few decades, primarily in developed countries, but efforts are being made in the less developed and developing countries which can't stay out of world processes of globalization and integration. Republic of Macedonia is no exception to these trends.

### 2. Characteristic of insurance sector in the Republic of Macedonia

In every serious analysis, relevant data are take into account, and because of that in this paper the latest relevant data for insurance sector of Macedonia is took, and it is for the year of 2015 and before that. The next data for 2016 will be available in the middle of 2017.

Analyzing relevant data for the sector, it can be seen that at the end of 2015, there were 15 insurance companies on the insurance market in Macedonia, of which 11 operating in the area of non-life insurance, and 4 operating in the area of life insurance. During the analyzed period an operating license was issued to 1 insurance brokerage company, and 1 license was revoked from an undertaking, maintaining the count to 30 insurance brokerage companies unchanged as compared to 2014. The count of insurance agencies increased by 3 new companies, reaching a total of 13 companies, and also the number of banks, which are performing insurance activities, increased by 2 banks, reaching a total count of 3 banks. In 2015, a total Gross Written Premium (GWP) is 8.28 billion denars (Macedonian currency denar, 1 US\$ = 58 denars), representing an 8.50% increase compared to 2014, which was 7.63 billion denars. In the non-life insurance segment this sum is 7.18 billion denars, in comparison with 2014, 6.74 billion denars, that means a 6.47% growth compared to 2014. The life-insurance segment is 1.10 billion denars in comparison with 888.32 million denars in 2014, which represents a growth of 23.94% compared to 2014. At the end of 2015, the insurance undertakings had at their disposal amount of 17.56 billion denars, an increase of 7.32% compared to the 2014, with 16.42 billion denars. At the end of 2015, the total calculated capital of insurance undertakings was 5.49 billion denars, a 5.93% growth compared to 2014. In 2015, the insurance sector reported profits in the amount of 513 million denars. The non-life insurance segment reported profits of 469 million denars, and the life insurance segment reported profits of 44 million denars.

### **2.1. Ownership Structure of insurance sector in the Republic of Macedonia**

The insurance companies are in dominant ownership of foreign legal entities from the financial sector (92.17%), which are partially or completely present in 14 of the total 15 insurance subjects on the market (Table 1). 11 insurance companies are parts of insurance groups with head offices in EU-Member States, whereas only one insurance subject is fully owned by domestic investors. In the life insurance segment, 2 insurance companies predominated, as a result of the short presence in the market (since 2011) of the remaining 2 life insurance subjects (Figure 1). In all life insurance companies, there was an increase in GWP. The insurance and reinsurance company - Macedonia in 2015 did not perform life insurance operations given that the existing portfolio was transferred to the insurance company WINNER Life (Table 2). In regards to the total GWP, the most significant market share is recorded in motor vehicle insurance of 52.96% (in 2014: 55.47%), where the motor third-party liability insurance (MTPL) participates with 44.59% (in 2014: 46.43%), and the voluntary motor vehicle insurance policies (Casco) with 8.37% (in 2014: 9.04%), Property insurance (against fire, natural disasters, theft and other risks) follows with 19.82% (in 2014: 18.07%), and insurance against accident consequences with 7.23% (in 2014: 7.61%). Also, the life insurance holds a significant market share with 11.64% (in 2013: 10.14%). The structure by lines of business, including a comparison with 2014, is shown in Figure 2.

### **2.2. Premiums in 2015**

In 2015, the insurance market recorded an increase of 8.52 % in the total written premium, compared to 2014. Taking into consideration the total amount of GWP, which was 8.279.764.000 denars, 7.178.772.000 are result of non – life insurance, and the remaining 1.100.992.000 denars of life insurance. In 2015 the non - life insurance indicated an increase of 437.678.000 denars in the GWP, namely an increase of 6.49 % compared to 2014. The life insurance had an increase of 212.663.000 denars in the total GWP compared to 2014, namely an increase of 23.94 %. As a reflection of this increase, the share in the total GWP is increased for 1.7 % and it takes part in the total GWP with 13.30% (Figure 3).

### **2.3. Number of claims in 2015**

The total number of settled claims in 2015 is 50.081 out of which 48.709 are claims of non-life insurance classes, while the remaining 1.372 settled claims are of life insurance classes. The non-life insurance claims have an increase of 1.466 in 2015 (3.10 %), while the life insurance claims have an increase of 11.54% in 2015, compared to 2014. (Figure 4)

## **3. Legislation for insurance in Macedonia**

Legislation for insurance in Macedonia is represented by basic and broader framework. The main general framework is represented by several Laws: The Law on Insurance Supervision, the Law on Compulsory Insurance in Traffic, and the Law on Voluntary Health Insurance, represent the basic legal framework regulating the conditions and the manner of performing insurance and reinsurance activities, the manner and conditions of performing insurance intermediation activities and conducting supervision over the operations of insurance undertakings, insurance brokerage companies, and insurance agencies.

The broader legal framework comprises the Contractual Law, the part referring to insurance contracts and the Company Law, and also the part from the Law for trade companies.

### **3.1. Law on Insurance Supervision**

It incorporates the insurance principles and standards of the International Association of Insurance Supervisors (IAIS), as well as the EU-Insurance Directives. The Law regulates the establishment and operations of insurance undertakings, risk management, the role of authorised actuaries, financial reporting, internal and external auditing, activities of insurance brokerage companies and insurance agency, supervision over insurance undertakings, procedure for decision-making by the Insurance Supervision Agency of Macedonia (ISA), operations of insurance and reinsurance pools, cooperation with supervisory agencies and EU-authorities, as well as penalty provisions.

### **3.2. The Law on Compulsory Insurance in Traffic**

The compulsory insurance in traffic is regulated by the Law on Compulsory Insurance in Traffic prescribing the agreements for compulsory insurance, the minimum insured amounts, the deadlines for reporting claims to and receiving claim compensations from the insurance undertakings, establishing the right to mediation, the competences of the Guarantee Fund, changing the method for determining the premium tariffs via the operations of the Commission for motor third party liability insurance. Also, the Law envisages facilitation of cross-border provision of insurance services by setting-up a so called authorised claims representative, and a damage compensation service, thus affecting these activities as soon as Macedonia becomes part of the EU. The adoption of amendments of this law harmonises the Law on Misdemeanours from a point of view of the fixed amount of fines imposed on insurance undertakings, that is to say, on the National Insurance Bureau. It also stipulates the amount of the fine for the responsible person within the legal entity at 30% of the fine set for the insurance undertaking, that is to say, to the National Insurance Bureau.

### **3.3. The Law on Voluntary Health Insurance**

This law prescribes the legal possibility and opens a wider scope of activities for the insurance undertaking to offer packages of health services, which are not covered with the system for compulsory health insurance. The voluntary health insurance is regulated as supplementary and private. Supplementary health insurance insures the partial costs coverage from own funds when using medical services from the compulsory health insurance (co-payment), in accordance with the regulations of compulsory health insurance and health care protection. The private health insurance allows cost coverage for using healthcare services with higher standard than those within the compulsory health insurance, the costs for supplementary healthcare services, as well using healthcare services in medical institutions outside the network of healthcare institutions where healthcare activities are carried out, and in private institutions that make, issue, and service orthopaedic and other devices.

## **4. Insurance Frauds**

Attempts of insurance frauds are becoming more frequent. It varies according to the manner of execution of crimes and by the way of its organisation. Association and cooperation between various institutions can contribute to detect attempts at fraud in insurance and prevention of harmful consequences. Each institution - Ministry of Interior, insurance companies, prosecutors, courts, are integral parts of the unique system that can and must contribute to the detection and prevention. As perpetrators of insurance frauds often occur people employed in insurance companies, which implies the need to build a special system for controlling the employees in insurance companies. It is necessary to point out that insurance fraud crimes often are made by arrangement of more people and in that sense, despite the commission of the basic insurance fraud crime, other crimes are performed, such as: falsification of documents, receiving and giving bribes, fraud of official position, malfeasance and other cases, which are usually detected by the collection of data and evidence about insurance frauds. A particular problem is that 90-95% of honest insurers pay increased premiums because of those 5-10% dishonest, that realize benefits through fraud insurance.

## **5. Conclusions**

Form all above it can be concluded that:

1. The development of the insurance market is affected by movements in the overall financial sector. Macedonia belongs to the countries with low economic development and consequently features a low developed sector of life insurance.

In the insurance market in Macedonia 15 insurance companies exist, of which only 4 insurance companies operating in the life insurance, while others are active in the group of non-life insurance. As in past years for reinsurance is registered only 1 company. In global terms, over 2/3 of the available financial resources on capital markets come from insurance and pension funds. These are also the longest funds in a national economy, with an average term to maturity of more than 10 years. The significance of the insurance premium and the investment is growing in the country, although Macedonia still lags the list of EU countries in terms of relative share premium to the country's Gross domestic product (GDP).

2. Macedonian insurance sector is characterized by relatively low share of GWP in GDP, compared to other EU countries. GWP participation in GDP in 2015 is 1.48% of GDP, which is really small and because of that it can be seen a big space for development of insurance and it is necessary to be done. According to these indicators, the insurance sector of Macedonia is approximately in the same level of development as in Romania, Serbia, Greece and Turkey. One of the real problems in insurance is the small number of companies for life insurance, insufficient knowledge of insurance products, and low living standards.

3. In the year 2015 realized GWP is increased of 8.50% compared to the GWP in 2014. In non-life insurance GWP, is increased of 6.47% compared to 2014. In the area of life insurance GWP is increased of 23.94% compared to the 2014.

4. In terms of regulative, it can be said that law regulative – laws and bylaws are in accordance to the European standards, and combined with bigger economic growth can means opening of insurance market for new players, bigger transparency in performing of activities of different subjects, introducing new products and packages, decreasing of costs of premiums, bigger competitiveness, bigger diversification of risks, improving the investment policies for achievement of higher yields at a given level of risk, the emergence of new financial instruments in the market of capital, establishing stronger internal control system of insurance and reinsurance, maintaining the long-term financial stability which is the basis for long-term economic growth.
